Goleta Creeks Report Card September 2007

Creek	Bacteria	Temperature	Dissolved Oxygen	Turbidity
Atascadero	B	D	C	B
Cieneguitas	F	C	C	C
Goleta Slough	B	C	C	B
Los Carneros	No Sample Taken - Site was dry for September event			
Maria Ygnacio	No Sample Taken - Site was dry for September event			
San Jose	C	D	C	A
San Pedro	No Sample Taken - Site was dry for September event			
Tecolotito	D	C	C	B

Grades are assigned based on single samples taken at the beginning of the month and may not remain valid under changing conditions.

E. Coli and Enterococcus are used by public health officials to indicate the possible presence of pathogenic bacteria and viruses.

Temperatures above 72° F (22° C) can be harmful to steelhead trout and other cold-water fish.

Even aquatic creatures need to breathe. The higher the levels of dissolved oxygen, the better.

Muddy or cloudy (turbid) water can clog fish gills and smother plant life, larvae, and eggs.

THIS MONTH'S TIP:

Planting native plants such as oaks, sycamores, willows and elderberry along creek corridors can provide habitat for animals, increase shade and reduce creek water temperatures. Be a good steward of our local creeks!

To volunteer for creek testing, or to find out more about these results and how they were graded, visit our website:
